

**CENTRAL ELECTRICITY REGULATORY COMMISSION  
NEW DELHI**

**Petition No. 15/SM/2015**

**Coram:**

**Shri Gireesh B. Pradhan, Chairperson**

**Shri A.K. Singhal, Member**

**Shri A.S. Bakshi, Member**

**Shri M.K. Iyer, Member**

**Date of Order: 25.01.2016**

**In the matter of**

Determination of Average Power Purchase Cost (APPC) at the national level

**ORDER**

The Central Commission, in discharge of its responsibilities under the Electricity Act 2003, viz. "regulating inter-state transmission of electricity, specifying grid code, and specifying standards with respect to quality and reliability of service," has notified the Central Electricity Regulatory Commission (Indian Electricity Grid Code) (Third Amendment) Regulations, 2015, and the Central Electricity Regulatory Commission (Deviation Settlement Mechanism and related matters) (Second Amendment) Regulations, 2015 to provide for the Framework on Forecasting, Scheduling and Imbalance Handling for Variable Renewable Energy Sources (Wind and Solar).

2. The aforesaid regulations provide for a framework to enable forecasting and scheduling of wind and solar generating stations that are regional entities. The framework is aligned with the existing settlement mechanism applicable to conventional generating stations under the purview of RLDCs, to the extent that the wind and solar generators are paid by beneficiaries as per schedule, and deviation from schedule is settled with the Regional DSM pool. The graded deviation settlement band provides an incentive for improving accuracy of forecasting, and uses the PPA rate of generators in long-term PPAs as the 'fixed rate' for deviation settlement. The relevant provision of the CERC (Deviation Settlement Mechanism and related matters) Regulations in this context (Regulation 5, clause 1, sub-clause v) is extracted below:

*“Where the Fixed Rate is the PPA rate as determined by the Commission under section 62 of the Act or adopted by the Commission under section 63 of the Act. In case of multiple PPAs, the weighted average of the PPA rates shall be taken as the Fixed Rate.”*

3. However, this fixed rate is not applicable to generators that are not in long-term PPAs, such as open access entities. In this context, the same clause as above states that:

*“Fixed Rate for Open Access participants selling power which is not accounted for RPO compliance of the buyer, and the captive wind or solar plants shall be the Average Power Purchase Cost (APPC) rate at the National level, as may be determined by the Commission from time to time through a separate order. A copy of the order shall be endorsed to all RPCs.”*

This implies that for Open Access wind or solar generators that are regional entities and selling power under the REC framework, and for Captive plants where PPAs do not exist, settlement shall be done at APPC determined at the national level. In pursuance of this provision, the Commission is required to determine the national level APPC.

4. In this context, it would be pertinent to mention that Regulation 5(c) of Central Electricity Regulatory Commission (Terms and Conditions for recognition and issuance of Renewable Energy Certificate for Renewable Energy Generation) Regulations, 2010 defines Average Power Purchase Cost (APPC) as follows:

*“for the purpose of these regulations ‘Pooled Cost of Purchase’ means the weighted average pooled price at which the distribution licensee has purchased the electricity including cost of self generation, if any, in the previous year from all the energy suppliers long-term and short-term, but excluding those based on renewable energy sources, as the case may be.”*

5. Accordingly, APPC at the national level has been determined by computing the average of APPC of all States and Union Territories, weighted by volume of conventional power purchased by the respective State/UT.
6. Data for approved purchase cost and volume of power for 2014-15, from the respective 2014-15 tariff orders of the States, have been considered. This approach has been followed as trued-up data for FY 2014-15 is not available in tariff orders of 2015-16 issued by majority of States. Data used for calculation of APPC in respect of all States

and UTs as well as the calculations and exceptions are given in the Annexure to this order.

7. The total cost of power purchase considered for computation of APPC excludes cost of generation or procurement from renewable energy sources and transmission charges. Exclusion of cost of generation or procurement from renewable sources is in alignment with the objective of determining APPC, which is to ascertain the average cost of power from conventional sources of electricity. Furthermore, with a view to consider energy costs only, transmission charges have been excluded from these calculations.
8. Based on the tariff orders issued by the SERCs/JERCs for the year 2014-15, the APPCs at the national level has been worked out as Rs. 3.40/kWh. This APPC value shall be applicable during the remaining months of FY 2015-16, as well as for FY 2016-17, for the purpose of deviation settlement in respect of the open access and captive wind and solar generators fulfilling the requirement of regional entities.
9. The Commission invited comments of stakeholders on the draft determination of APPC through an order notified on 03.12.2015, by 21.12.2015. However, no comments were received on the same. Hence, the Commission sets the national APPC at Rs.3.40/kWh.
10. The petition is disposed of in terms of the above.

## Annexure

### DETERMINATION OF APPC AT THE NATIONAL LEVEL

1. Regulation 5(c) of Central Electricity Regulatory Commission (Terms and Conditions for recognition and issuance of Renewable Energy Certificate for Renewable Energy Generation) Regulations, 2010 defines Average Power Purchase Cost (APPC) as follows:

*“for the purpose of these regulations ‘Pooled Cost of Purchase’ means the weighted average pooled price at which the distribution licensee has purchased the electricity including cost of self generation, if any, in the previous year from all the energy suppliers long-term and short-term, but excluding those based on renewable energy sources, as the case may be.”*

2. Thus, Average Power Purchase Cost (APPC) at the national level has been obtained by computing the average of APPC of all States and Union Territories, weighted by volume of conventional power purchased by the respective State/UT.
3. Data for approved purchase cost and volume of power for 2014-15 was obtained from the respective 2014-15 tariff orders of the States/UTs. Links to these tariff orders can be found in Table-II below. In case there were separate tariff orders for different utilities, they have been listed separately.
4. Exceptions to this dataset were as follows:
  - a. For Tripura, 2013-14 tariff order has been considered, as the state had not issued an order for 2014-15.
  - b. For Maharashtra and Jharkhand, tariff order of 2015-16 has been used, as the state had not issued an order for 2014-15.
  - c. For Telangana, 2015-16 tariff order has been considered as the state was newly formed.
  - d. For Punjab, self-generation cost data has not been included due to unavailability in the tariff order.

5. In case of multiple utilities operating in a state, average of power purchase cost weighted by power quantum of respective utilities was computed to derive APPC for the entire state.

**Illustration:**

$X_i, X_{ii}, X_{iii}, \dots, X_N$  denoting average per unit power purchase cost for respective utilities in a state (excluding cost of renewables).

$Q_i, Q_{ii}, Q_{iii}, \dots, Q_N$  denoting power quantum purchased (excluding renewable power).

Then,

$$APPC_{(state)} = (\sum_{n=i}^N X_n Q_n) / \sum_{n=i}^N Q_n$$

6. The total cost of power purchase considered excludes cost of generation or procurement from renewable energy sources. In orders where renewable energy cost and quantum has been mentioned in total power purchase summary, it has been subtracted from the totals to obtain values corresponding to conventional sources.

$$Power\ Quantum_{(Conventional\ Sources)} = Power\ Quantum_{(Total)} - Power\ Quantum_{(Renewable\ Sources)}$$

$$Purchase\ Cost_{(Conventional\ Sources)} = Purchase\ Cost_{(Total)} - Purchase\ Cost_{(Renewable\ Sources)}$$

7. Furthermore, with a view to consider energy costs only, transmission charges have been excluded from these calculations.
8. Thus, if  $APPC_1, APPC_2, \dots, APPC_N$  are state level APPCs, and  $Q_1, Q_2, \dots, Q_N$  are volumes of non-RE power procured by the states respectively, then, APPC at the national level is computed as follows:

$$APPC_{(national)} = (\sum_{i=1}^N APPC_i Q_i) / \sum_{i=1}^N Q_i$$

9. Data for each state is given in Table- I below. Table - II gives links to the respective tariff orders from which data was extracted.

<b>Table- I : State-wise Power Procurement Volume / Cost / Average Cost Per Unit for FY 2014-15</b>
